Product Literature

Introduction

The world is changing so rapidly- and so we are. The traditional videoconferencing solutions have changed its phase in recent years to meet the requirement of the new world. Corporate world has long started to appreciate the social and financial benefits of replacing business travel with corporate video conferencing using the existing IP infrastructure

The videoconferencing industry has undergone a dramatic change. In the recent years, prices have fallen dramatically, while ease-of-use and video quality has improved.

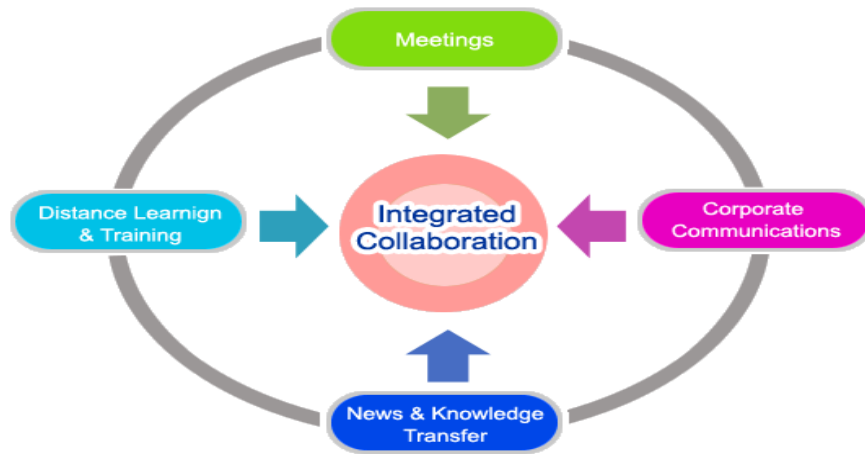

The world is rapidly becoming IP-centric. Businesses, governments, educational, institutions, and consumers have all adopted IP technology at breath-taking speeds. Multimedia-savvy IP networks are inevitable.

Broadband access is inevitable. With the IP revolution, videoconferencing is evolving into one of many integrated collaboration tools enabling a wide range of internal and external communications.

The new generation audiovisual solutions demands the combination of voice, video and as well as the collaborative data to be transferred over the network in the real time. It enables people who are separated by distance and time to work together across LAN and WAN connections to create value for their organizations

By leveraging its years of expertise and through its continued devotion in the technology, Neotechsoft has produced a video subsystem that will stand as the standard for the multimedia data transfer over industry. With its state-of-the-art technology and years of experience at home in abroad, Neotechsoft is now ready to serve you better starting from corporate video conferencing needs to E-learning solutions.

The Idea

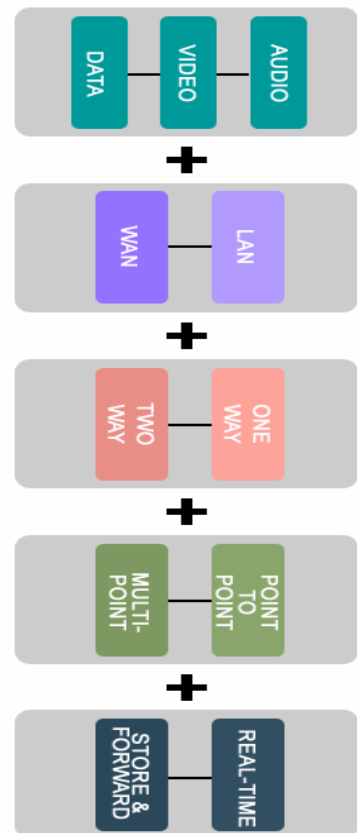

The videoconferencing involves the integration of traditional conferencing, data transfer/share and the streaming of the multimedia data. The audiovisual data can be used in so many varieties of ways.. People from all walks of life can be benefited from this kind of solutions.

The videoconferencing solution has now become much more than meeting people on the net. The power of multimedia data enables the user to ignore the geographical and time distances, that results in saving the travel cost, reducing the wear and tear of human and monetary capital and thus it improves the inter and intra corporate communications and as well as the communications among valuable clients, suppliers and partners. The basic idea behind developing the collaborative audiovisual solutions is to allow two or more users to interact in real time with audio, video and data

Realizing the need of the ever-changing market needs, Neotechsoft come up with a no. of solutions to meet any possible videoconferencing needs.

eMEETplus is a complete video conferencing solution. Neotechsoft provides a true videoconferencing solution that is robust, scalable and bandwidth-efficient. The clustered solution of server technology makes it highly available, reliable and manageable. With its capability to support a huge amount of concurrent users, the eMEETplus server suit is the perfect choice for low end home business or personal business users as well as for giant corporate and commercial portals. This product family offers a range of choices to best suit large-scale enterprise applications, performance requirements, and bandwidth availability. It is highly scalable to fit to any heterogeneous network condition. The server solution is available for varieties of platforms. It

supports both P2P and server distributed manner for user communication. A strong server management tool enables the server administrator to manage the server with ease.
